

Where does our food come from?

In the UK we cannot produce all types of food so we must import them from abroad. For example, food such as bananas and coconuts as they need a warmer climate to grow.

The type of soil we have in the UK also stops us being able to grow certain types of fruit and vegetables.

Farm to Fork

How big is my carbon footprint on the world?

Our carbon footprint is the amount of carbon dioxide we release into the environment.

We can help to reduce our carbon footprint by changing little things in our everyday life.

By buying our food from local farms or from Britain we reduce the need for vehicles such as planes or lorries to transport our food.

Directions on a compass

It is important we understand how to use a compass as it can help us to find out where we are and also to follow directions.

Maps often have a compass and the top of the map is usually North.

The needle in the middle of the compass moves to show you which direction you are facing.

One way to remember the order of a compass is to use a silly saying, for example:

Naughty

Elephants

Squirt

Water

Texts we are reading for pleasure or knowledge

Key Vocabulary

Carbon footprint	Import
Production	Environment
Climate	Hibernation
Compass	Climate
